

Abstract

A seal (37) for sealing the fuel injector (1) from a valve mount opening (48) of a cylinder head (43), the seal radially surrounding the region of the discharge-side end of a fuel injector, sealingly rests on the valve mount opening opening (48) via a first section (38). By way of at
5 least an axial partial section (46), which extends only across a portion of the axial height of the seal (37), the seal (37) is fitted in the region of the discharge-side end of the fuel injector (1) in integral fashion, by form-fit and/or force-locking.
